

EICR Lead Automation.

An AI system that reads the inbox, sorts real leads from the noise, and prepares a ready-to-send quote before anyone picks up the phone. Built for a UK electrical services business.

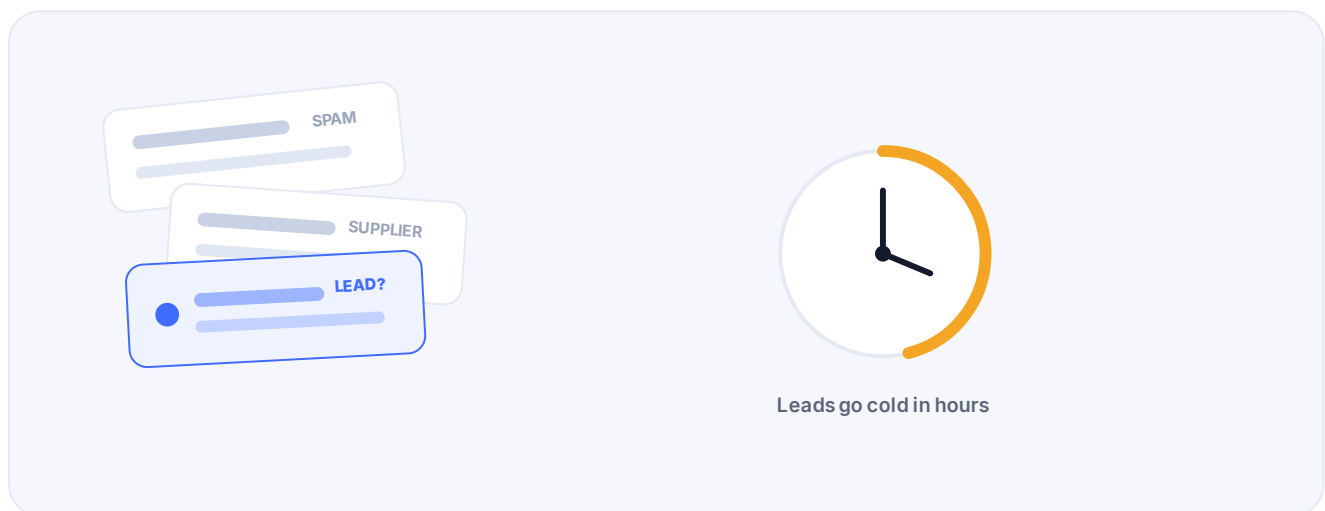

THE CLIENT

Leads were coming in. The inbox was the problem.

A UK electrical company that does EICR work, Electrical Installation Condition Reports. Most of their new business comes from paid Facebook and Google ads, so enquiries arrive as form submissions that drop straight into a shared email inbox.

THE PROBLEM

New enquiries sat in the same inbox as supplier invoices, newsletters, spam, and replies from existing customers. Before anyone could book a job, a person had to read each email, work out whether it was even a new lead, copy the customer's details out by hand, write a reply, put a quote together, and chase the customer whenever something was missing.

That cost them in a few ways. Replies were slow, and with paid leads the business that answers first usually wins the job. Nothing moved unless someone was sat at the inbox. Quotes came out inconsistent, and details got mistyped or dropped. A lot of hours went into reading and sorting mail that a computer could handle just as well.

WHAT I BUILT

An AI layer that sits on top of the inbox.

It reads every incoming email, separates the real leads from everything else, pulls out the job details on its own, and prepares a reply with a quotation PDF already attached. The owner stays in control of what actually goes out.

THE ONE RULE UNDERNEATH IT ALL

Nothing gets sent without a person approving it.

The AI writes the draft. The owner reads it, attaches anything extra if needed, and clicks send. The machine does the work; the human stays in charge.

AT A GLANCE

Enquiry lands

Ad form submission arrives as an email in the shared inbox.

Sorted instantly

Lead, existing customer, supplier or spam, tagged automatically.

Details extracted

The eight fields needed to quote, pulled out on their own.

Quote drafted

Reply written and a branded quotation PDF attached, ready to review.

HOW IT WORKS

From enquiry to ready-to-send quote.

1

A lead arrives

The customer fills out the ad form and it lands in the inbox as an email.

2

Every email gets sorted

The AI reads each one and tags it, so real leads stop getting buried.

New lead

Existing customer

Supplier

Spam

3

The details get pulled out

For each lead, the system reads off the eight things you need in order to quote.

Service type

Date

Postcode

Property size

Name

Email

Phone

4

Then it decides what to do

✓ ALL DETAILS PRESENT

Drafts a reply and generates a branded quotation PDF, attached and ready to go.

! SOMETHING MISSING

Drafts a short email asking for just that one detail, and nothing else.

5

The follow-up loop

When the customer replies with the missing information, the system reads it, adds it to what it already had, and drafts the reply again, this time with the quote attached.

6

The owner approves and sends

Opens the draft, attaches anything extra if they want to, reads it over, and sends it. Nothing leaves without that click.

WHAT MAKES IT USEFUL

Fast, accurate, and always in your control.

Replies in seconds

A draft is ready within seconds of the enquiry landing, not hours later.

You sign off every send

No machine emails your customers on its own. Approval is built in.

Leads never get lost

Real enquiries are separated from supplier mail and spam automatically.

Quotes build themselves

Branded quotation PDFs generated and attached, no manual work.

Asks only for what's missing

Targeted follow-ups instead of generic back-and-forth.

Runs many clients at once

Each business connects its own inbox, and drafts sound like them, not a template.

UNDER THE HOOD

Kept simple here, but there is real engineering behind it. Reading and sending run over IMAP and SMTP. The sorting, extraction and drafting run on Anthropic's Claude. Quotes come out as branded PDF documents, and a Django and Celery backend handles the scheduled work behind a dashboard where the owner reviews and approves.

Email

IMAP · SMTP

Dashboard

Review · approve

THE RESULTS

Every lead caught, sorted, and answered.

RESPONSE TIME

**Hours →
Seconds**

A reply is drafted the moment
an enquiry lands.

ADMIN PER LEAD

~15 → ~2 min

Down to a quick review and a
click to send.

HANDLED WEEKLY

40+ leads

Sorted automatically, none
slipping through.

BEFORE

Manual reading and sorting
Details copied out by hand
Slow, inconsistent replies
Leads going cold

AFTER

Sorted the second it arrives
Details extracted automatically
Draft plus quote ready to send
Owner approves and sends

What I can build for you

The same engine works for any business that runs on inbound enquiries: electricians, plumbers, roofers, and the rest. If enquiries are landing in an inbox and someone is sorting, replying and quoting by hand, I can automate the whole path and keep a person in control of what sends.
